This handout is intended only as a guide and is based in part on the 2015 Minnesota State Building Code, Grand Rapids City ordinances, and good building practice. While every attempt has been made to insure the correctness of this handout, no guarantees are made to its accuracy or completeness. Responsibility for compliance with applicable codes and ordinances falls on the owner or contractor. For specific questions regarding code requirements, refer to the applicable codes or contact your local Building Safety Division.

## TYPICAL BEARING WALL FRAMING

TABLE R602.3(5) SIZE, HEIGHT AND SPACING OF WOOD STUDS ${ }^{\text {a }}$

| $\begin{array}{\|l} \text { STUD } \\ \text { SIZE } \\ \text { (inches) } \end{array}$ | BEARING WALLS |  |  |  |  | NONBEARING WALLS |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | Laterally unsupported stud height ${ }^{a}$ (feet) | Maximum <br> spacing <br> when <br> supporting a <br> roof-ceiling <br> assembly or <br> a <br> habitable <br> attic <br> assembly, <br> only <br> (inches) |  |  | Maximum spacing when supporting one floor height ${ }^{\text {a }}$ (inches) | Laterally unsupported stud height ${ }^{a}$ (feet) | Maximum spacing (inches) |
|  |  |  |  |  |  |  |  |
| $2 \times 3^{\text {b }}$ | - | - | - | - | - | 10 | 16 |
| $2 \times 4$ | 10 | $24^{\text {c }}$ | $16^{\text {c }}$ | - | 24 | 14 | 24 |
| $3 \times 4$ | 10 | 24 | 24 | 16 | 24 | 14 | 24 |
| $2 \times 5$ | 10 | 24 | 24 | - | 24 | 16 | 24 |
| $2 \times 6$ | 10 | 24 | 24 | 16 | 24 | 20 | 24 |

For SI: 1 inch $=25.4 \mathrm{~mm}, 1$ foot $=304.8 \mathrm{~mm}, 1$ square foot $=0.093 \mathrm{~m}^{2}$.
a. Listed heights are distances between points of lateral support placed perpendicular to the plane of the wall. Increases in unsupported height are permitted where justified by analysis.
b. Shall not be used in exterior walls.
c. A habitable attic assembly supported by $2 \times 4$ studs is limited to a roof span of 32 feet. Where the roof span exceeds 32 feet, the wall studs shall be increased to $2 \times 6$ or the studs shall be designed in accordance with accepted engineering practice.

## TYPICAL FRAMING FOR NON-BEARING WALLS OR BASEMENT WALLS

3-inch-by-6-inch by a 0.036 -inch-thick galvanized steel plate nailed to each segment by six 8d nails on each side or secure to

Plates on concrete floors must be treated unless there is a vapor barrier under the slab.

1 X Furring strips may only be used over solid backing or framing spaced not more than 24" o.c. K Furring strips placed against a concrete or masonry wall must be treated unless a vapor retarder is placed between the wall and furring strips

## ROOF FRAMING

Ridge board 1X min

## ENGINEERED LUMBER

This handout does not cover engineered lumber such as floor or roof trusses, I joists, glue-laminated members, structural composite lumber, and similar products. Refer to the manufacturer's installation instructions for further information.

## OTHER FRAMING HANDOUTS

Other handouts are available on cutting, boring and notching framing, fireblocking, gypsum wall board, fasteners, and a host of other code requirements pertaining to wood framing.
