

Conservation

Compact fluorescent light bulbs can save up to 78% of electricity compared to incandescent light bulbs.

A compact fluorescent light bulb can last 13x longer than the standard incandescent bulb!

Television Energy Consumption

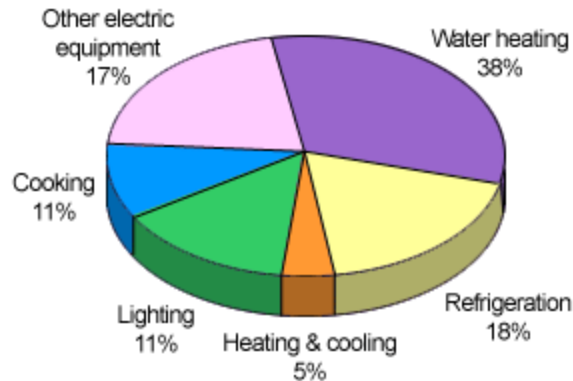

(4 hrs/day)

14 - 16" = 11 kWh

18 - 19" = 13 kWh

23 - 25" = 20 kWh

Replace appliances with energy-efficient models. When old models wear out, replace them with modern, energy-efficient ones.

Energy efficient choices for your home can save about a third of your energy bill with similar savings of greenhouse gas emissions, without sacrificing features, style or comfort.

Turn faucets off immediately after use. We all tend to leave the faucet running while we wash dishes or shave. Turning the faucet on only when necessary can save thousands of gallons of water a year, not to mention the energy to heat it.

Use light from windows.

Natural light is more efficient than electric, not to mention free.

Take a shower instead of a bath. The average bath uses twice as much hot water as a 5-minute shower.

Money Isn't All You're Saving
